

NATIVE TREE OF JAPAN

Trees are the soul of nature

Care Sheet Japanese Maxi Bonsai

Our Maxi Bonsai are imported directly from Japan, where they have been traditionally grown by craftsmen with skillful techniques. Some of our cloud trees are over 50 years old. The Japanese cloud trees are carefully chosen from selected Japanese nurseries.

Roots

The Japanese maxi bonsai are imported with carefully packed root balls in order to maintain a well developed root system.

Planting

When planting the Maxi Bonsai, make sure the location has well drained soil. If necessary add grind or sand to prevent the roots from drowning or rotting.

Shading

We recommend giving the Maxi Bonsai proper protection when planting. Especially newly imported trees will need protective shading against bright sunlight during the first 2 months.

Pruning

In order to keep the attractive "cloud shape", the Maxi Bonsai should be trimmed at least 2 times a year.
